
The guide under review differs from most in that it emphasizes bibliographic tools and techniques necessary for research, rather than stressing descriptions of journals, theories, etc. While such information is provided, it is not included at the expense of bibliographic information. Traditional topics, such as the card catalog, indexes/abstracts, bibliographies, and government documents, are discussed, as are archival research and computer literature searching.

Regarding the card catalog and government documents, one statement is somewhat misleading. Simpson indicates that "The only separately published items generally not [emphasis in original] included in the catalogs are those special collections of documents maintained on microform" (p.87). Many libraries, especially those employing SuDocs classification, do not catalog documents in any format, not only microform. This criticism notwithstanding, this is an excellent guide that will be of use to researchers and students in a wide range of social science disciplines.—David R. McDonald, Social Science Bibliographer, Farrell Library, Kansas State University, Manhattan.
